November 2011

The Intel® Embedded Development Board supports different Intel® Atom™ processor modules. Two modules are available for the platform using the N450 or D510 processors. This WES7 support package includes 32-bit and 64-bit drivers for the following peripherals:

- Intel® Graphics Media Accelerator 3150
- Intel® Ethernet Drivers

Warning! The package is an example only, and the drivers supplied might not be the latest drivers available. Please see the board manufacture for any updates.

The drivers are place in the Out-of-Box Drivers folder for both 32-bit and 64-bit distribution shares. In the root of each folder is a PMQ file that was generated by TAP.EXE.

Support Package Driver Contents

1. Copy the folders in the Out-of-Box Drivers folder to the corresponding folder of the 32-bit and 64-bit distribution share. The PMQ files should be placed someone else in your file system.
2. Open Image Configuration Editor (ICE).
3. Open the distributions share.
4. Create a new answer file.
5. Select **File->Import->Import PMQ...** to import the **devices_XX.pmq**.
6. Under Out-of-Box Drivers, right-click on **Intel EDB XX** and select **Insert Driver Path to Pass 2 offlineServicing**.
7. Add any other packages and drivers to your answer file.
8. Validate the answer file.
9. Build an IBW disk using the answer file, and copy the image to a bootable USB flash disk.
10. Boot and install the WES7 image on the Intel EDB.
